Enabling Exceptional Science

## QC Testing Services

**Make sure your cell lines are not harbouring any unwanted pathogens and are genetically correct.**

Cryoniss has teamed up with premium contract research organisations to offer a suite of cell line testing assays performed on a weekly basis.

### Tests available are:

- Mycoplasma detection
- Cell sterility testing
- Human cell line authentication testing
- Interspecies contamination testing
- Mouse, rat, dog cell line authentication testing

To book this pay-as-you-go service, simply email [qc.testing@cryoniss.com](mailto:qc.testing@cryoniss.com) by Tuesday 12pm.

We will provide dry ice and packaging and coordinate collection of your frozen cell pellet (>1 million cells washed in PBS) the following Monday. You will receive a personalised report back that same week with the results and a single invoice, covering the logistics, CRO and Cryoniss charges.

Existing customers storing samples with us will automatically receive a 10% discount on our coordination fee.

By using Cryoniss, you not only have the reassurance that the screens are sensitive and cover the breadth of species that pose a risk to your studies, but you will also benefit from shared logistics fees and bulk purchasing from our suppliers.
